Timber - 15 years

Hexagon playground stumps can be used and displayed in many ways. They can be clustered altogether to create graduating steps up, split into smaller groups for an aesthetically pleasing trail to link items of playground equipment together, or they can be used singularly as seating.

Our oak hexagon stumps are sold in standard sets of 6 ranging from 175mm to 450mm above ground level however custom sizes and quantities are also available. Each stump is recommended to be buried 300mm into the ground to ensure safety and stability.
